Experiment

- I paid \$4,662 for 2,331 respondents with Lucid and \$168 with MTurk. I can spend MTurk whenever I want. Lucid will wait for my go-ahead to launch the actual project

Structure outline

- Structure everything around surveys/measurement/ordinal variables, just like in my Kerwin proposal
- Paper I is the ordered probit threshold approach for blocking on ordinal variables
 - Simulations
- Paper II uses the paper I thresholds to adapt multiple hot deck imputation of missing data for ordinal variables
 - Simulations
- Paper III applies paper I and II methods in an online survey experiment on the potential importance of moral arguments for frame strength
 - MTurk for pre-testing
 - Survey experiment

Committee

- I want a committee member who knows a methods diss, is supportive, and not problematic. I don't need more guidance; I have Jeff and Ryan for that. Candidates:
 - Mike Alvarez
 - * Ask him to be external reader at PolMeth
 - Liz Suhay
 - * She has input on framing but is fine with the methods parts, since Jeff and Ryan have signed off on them
 - * She would be happy to be a committee member
 - Joe Young
 - Jan Leighley

Ordinal blocking

- `ordered_outcomes_modeling`
 - Do Monte Carlo simulations
 - * Read through the resources Jeff sent me
 - Emphasize machine learning in the write-up

Ordinal missing

- Ordinal Hot Decking
 - `testing.R`
 - * Continue with TO DOs
- Theory
 - Step by step fill in the sections on Missing Data, Deletion, and Imputation
