## April 26, 2020

### Experiment

• I paid \$4,662 for 2,331 respondents with Lucid and \$168 with MTurk. I can spend MTurk whenever I want. Lucid will wait for my go-ahead to launch the actual project

#### Structure outline

- Structure everything around surveys/measurement/ordinal variables, just like in my Kerwin proposal
- Paper I is the ordered probit threshold approach for blocking on ordinal variables
  - Simulations
- Paper II uses the paper I thresholds to adapt multiple hot deck imputation of missing data for ordinal variables
  - Simulations
- Paper III applies paper I and II methods in an online survey experiment on the potential importance of moral arguments for frame strength
  - MTurk for pre-testing
  - Survey experiment

### Ordinal missing

- Chapter write-up
  - Write up the chapter focusing on the performance and speed of the packages under the different circumstances I tested

#### Framing

- Reworking theory
  - Think and read more systematically about my argument and what my test(s) would look like (don't rewrite chapter just yet):
    - \* Sharpen up the explanation of what morality is (Kinder on the "primary ingredients" of public opinion (one of which is "matters of principle"), Feldman on values, Milton Rokeach on values)

#### Ordinal blocking

- ordered\_outcomes\_modeling
  - Pick this up again when the ordinal missing write-up is done and has been signed off on
