Experiment
- I paid \$4,662 for 2,331 respondents with Lucid and \$168 with MTurk. I can spend MTurk whenever I want. Lucid will wait for my go-ahead to launch the actual project

Structure outline
- Structure everything around surveys/measurement/ordinal variables, just like in my Kerwin proposal
- Paper I is the ordered probit threshold approach for blocking on ordinal variables
    - Simulations
- Paper II uses the paper I thresholds to adapt multiple hot deck imputation of missing data for ordinal variables
    - Simulations
- Paper III applies paper I and II methods in an online survey experiment on the potential importance of moral arguments for frame strength
    - MTurk for pre-testing
    - Survey experiment

Ordinal missing
- Waiting for feedback from Ryan and Liz

Framing
- Waiting for feedback from everyone

Ordinal blocking
- Do Monte Carlo simulations
    - Waiting for meeting with Jeff and Ryan re second half of chapter
